AUTOMOTIVE TUNNEL WASH

Florida Chemical manufactures products to clean, protect and maintain your customer's vehicle and protect your investment.

Pre-Treatment

When cars are being cleaned before entering a wash bay, spot clean with insect removal products, wheel & tire cleaners, tar & gum removers and windshield wash products.

Pre-Sprays/Arch Sprays

Easily break road film's magnetic bond with high and low pH arch sprays. The neutralization of the magnetic bond provided by your spray bar application of each product will allow the car wash shampoo to effectively clean the car.

Car Wash Shampoos

The industry staple is the Tri-Color Foam Shampoo. Florida Chemical manufactures tri color shampoos that are high foaming and highly effective at road film removal. If your system only uses a single product, choose your favorite color or utilize one of the other foaming shampoos in our line.

Protectants

Florida Chemical manufactures a range of protectants to meet your needs. Tri-Color Protectant is a popular addition to any automated tunnel operation. Options are also available for spray wax and clear coat protectants that can be added to your line.

Rinse Aids

Rinse aids are a popular way to increase the efficiency of your drying systems and to add to the glossy, waxed look of the vehicle as it exits the wash bay. Select from a number of rinse aids that offer characteristics to meet your needs that include beading, sheeting, and residual repellency additives.

Spray Wax

Spray Waxes take the spot free finish to the next level. With natural Carnuba and Montan waxes to protect the finish and impart gloss on vehicle surfaces. If you are not applying a protectant during the wash, use of a spray wax as a rinse aid will give your customer's vehicle a protective finish.

Touchless Car Wash

If your wash bay(s) utilize touchless high pressure systems, Florida Chemical has solutions that are specifically designed to maximize the efficiency of the system. Without physical agitation, the touchless products combine with system pressure to create a chemical break of the road film.

Tunnel Maintenance

Keep your tunnel investment looking and operating at its best. With tunnel maintenance products, you can keep your systems free from build up that is typical in car wash operations and avoid maintenance issues.
