Florida Chemical Concrete Products

CONCRETE

Florida Chemical manufactures cutting-edge concrete wash products that remove tough buildup without harming your equipment. We have products for every operational need, at any price point.

Liquid Hammer

Use the flagship of our line for maintaining your fleet and equipment. Liquid Hammer is the leader in the industry in safety and performance. As a non-regulated product line that is backed by years of data, the Liquid Hammer line is the only line of non-corrosive products on the market that will perform as advertised.

Hammerhead

Hammerhead concrete truck wash is designed as an acid replacement technology. Using a non-corrosive buffering system, Hammerhead achieves acid efficiency with a dramatic improvement in safety.

Phos-Wash

The Phos-Wash line is a phosphoric acid concrete truck wash line designed for use when companies want to reduce or remove the use of harsh acids. Phosphoric acid presents an opportunity to move to a safer product while maintaining the efficiencies of acids.

Acid Wash

As a long time supplier to the concrete industry, Florida Chemical manufactures a wide range of traditional truck wash acids that can be used to clean all types of fleet equipment.

Concrete Truck Wash

Our concrete truck washes are similar to the Acid Wash line in the traditional acid components. Concrete Truck Washes make use of acid blends that create synergies to increase the performance of traditional single acid cleaners.

Cab Washes

Depending on your concrete or cement removal selection, fleets can benefit from a wash and wax type product for the daily wash of equipment areas that do not need a removal product. These washes will also add a renewed shine and gloss to your equipment.
